

HIV/AIDS

HIV/AIDS

What is it?

- HIV is a blood borne virus
- It weakens the immune system over a long period of time.
- Being HIV positive does not mean that you have AIDS

How do you get it?

- Unprotected vaginal or anal sex
- It's also a risk to share tattooing, piercing and drug injecting equipment
- Having an untreated STI may increase your chance of getting HIV

What are the symptoms?

- Some people have no symptoms at all
- First infection may include fever and rash

How do you treat/prevent it?

- There is no vaccine or cure but treatment is available
- Condoms prevent you getting it and spreading it
